DAVOS INSTALL GUIDE		Pages (4/9)
Author : Chayan Hazra	Version: Davos Version 7.0.0	Date :18-03-2014

1 Introduction

³⁵₁₇ Davos provides a web-services interface to allow third party automation tools to integrate into Zermatt's planning and reporting infrastructure, thus allowing customers to leverage prior investments in automation, while reaping the benefits of superior QA process management technology.

Document Purpose

- The installation guide walks you step-by-step through installation of Davos. It gives troubleshooting information for installers. To get further information refer [ZUG Forum](#) and can be found in the installation directory as Davos Release Notes.txt

Intended Audience

- This is intended for people who would be designing test-cases written in Chur on Zug execution environment using using Davos API.

3 Installation Instructions

3.1 Davos installer download

- ³⁵₁₇ Download the installer package from the Automature FTP site. Please fill up contact information form if needed.

3.2 Davos Database setup

This step is only required if you are installing Davos for the first time. If you have Davos installed then you can skip this step.

- Assuming you already have MySQL server installed in your system, please run the following two commands from terminal:

```
mysql -u username -ppassword davos < davosSchema.sql
```

```
mysql -u username -ppassword < CreateDavosUser.sql
```

You will find the two sql files in the same folder where davos installer is present.

Davos connects to MySQL database using the default port(3306).

3.3. Initialization of Davos installation

Run the installer on terminal with super user permission. It will extract the required file and execute the setup file. The setup file copies the required files to specified location and registers Davos as Ubuntu daemon.

1. Open terminal. Move to download directory where Davos-V6.4.1.2013 file exists.
2. Execute this command using super user permission.

```
sudo sh Davos-V6.4.1.2013-08-01_07-19-13.102.sh
```

3.4 Configuring Davos daemon

- ³⁵₁₇ Davos daemon is started automatically at start-up and listens on port 4567 by default.

- ³⁵₁₇ The command to start, stop and restart Davos daemon

```
service davos start
```

```
service davos stop
```

```
service davos restart
```

- ³⁵₁₇ The port number and MySQL database server hostname can be changed from the config.rb file in /var/www/davos/config.rb

5 Troubleshooting the Installation

If you get the following error please follow the steps mentioned below

Invalid gemspec in [/var/lib/gems/1.8/specifications/tilt-1.3.3.gemspec]: invalid date format in specification: "2011-08-25 00:00:00.000000000Z"

Invalid gemspec in [/var/lib/gems/1.8/specifications/dm-serializer-1.2.1.gemspec]: invalid date format in specification: "2011-10-24 00:00:00.000000000Z"

```
automature@Meluha:/var/lib/gems/1.8/specifications$ sudo pico tilt-1.3.3.gemspec
```

```
automature@Meluha:/var/lib/gems/1.8/specifications$ sudo pico dm-serializer-1.2.1.gemspec
```

step 1. cd /var/lib/gems/1.8/specifications

step 2. open the files(tilt-1.3.3.gemspec and dm-serializer-1.2.1.gemspec) in any text editor

step 3. change the s.date = %q{2011-10-13 00:00:00.000000000Z} to s.date = %q{2011-10-13}
